

XRP–BTC Regime Signal Engine (2-of-3 Confluence Model)

This tool is a rules-based market condition detector for XRP traders. It identifies low-risk continuation environments

using BTC context, XRP structure, and momentum confirmation. It does NOT place trades.

Regime Score Meaning

0 = No alignment (stay out)

1 = Context forming (observe)

2 = Trade-quality setup (prepare / manage risk)

3 = Strong continuation (highest quality)

Conditions

BTC Stability: BTC holds a level for 15+ minutes and makes no new lower low.

XRP Structure: XRP breaks and holds 1.600–1.602 and pullbacks hold above 1.595.

Momentum: Strong green candle with follow-through, not instant rejection.

Usage

Run the script and wait for score ≥ 2 . Always confirm on the chart. Exits are based on structure invalidation, not score changes.
